

# Duglass Design

## Decorated Tempered Glass

Duglass Design is decorated on one of its surfaces with ceramic glazes, applied by serigraphy or rolling, that through a controlled thermal process achieves the fusion of the paint, making the decoration permanent. The final product has the same high stability and resistance and practically the same durability as glass.

Ariño Duglass' customers have a help and advice service on design on design available to them in order to reproduce industrially the most demanding decorative ideas and projects.

### Dimensions

Maximum dimensions	Minimum dimensions	Thickness
4500 x 2440 mm	300 x 300 mm	4-15 mm

### Instructions for use

- The behaviour of some colours of the serigraphy can vary slightly according to the thickness of the glass, reason for which it is better not to mix thicknesses in order to obtain greater uniformity.
- In batches of different glass there could be small variations in the base colour. Therefore it is recommendable that the amount of glass required be carefully calculated.
- When installing silk-screen printed glass, you have to keep in mind the lighting, as different lighting and different angles of incidence of the sun can vary the tone.
- Prior to installing serigraphied glass in double glazing it is necessary to carry out a study on the total energy absorption to know beforehand the risk of breakage by thermal shock.
- The final colour of the ceramic paint should be accepted after seeing the tempered samples.
